DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Crooks et al. (US 6,088,688).

Crooks et al. teach a computerized utility method and system for utility tracking, comprising:

As per claims 1, 7 and 13,

providing a host system capable of communicating with a client system over an Internet connection, the host system having an Internet-ready framework (column 2, lines 13-27; column 5, lines 50-56);

embedding the non-Internet enabled software application in the Internet-ready framework locally on the host system (column 2, lines 13-27);

permitting selective access to the host system by the client system to access and run the non-Internet enabled software application to display utility data (column 2, lines 13-27).

Crooks et al. do not specifically teach that said software application is non-Internet enabled software.

However, these differences are only found in the nonfunctional descriptive material and are not functionally involved in the steps recited. The “providing” through “permitting” steps would be performed the same regardless of the type of said software application.

Thus, this descriptive material will not distinguish the claimed invention from the prior art in terms of patentability, see *In re Gulack*, 703 F.2d 1381, 1385, 217 USPQ 401, 404 (Fed. Cir. 1983); *In re Lowry*, 32 F.3d 1579, 32 USPQ2d 1031 (Fed. Cir. 1994).

As per claims 2, 8 and 14, said method and system, wherein the utility data are acquired automatically from one or more remote terminal units (column 2, lines 13-27).

As per claims 3, 9 and 15, said method and system, wherein the utility data include power use data (column 2, lines 13-27).

As per claims 4, 10 and 16, said method and system, further comprising:
prompting a user of the client system to enter a password (column 4, line 66 – column 5, line 1);

permitting access to the host system only if the password entered by the user is identical to a predetermined password (column 4, line 66 – column 5, line 1).

As per claims 5, 11 and 17, said method and system, wherein permitting selective access to the host system includes permitting selected access to selected data stored on the host system (column 5, lines 2-24), and running said software application includes plotting the utility data in a graphical format (column 2, lines 27-29).

As per claims 6, 12 and 18, said method and system, wherein the utility data include a utility consumption time series (column 5, lines 17-18).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure (see form PTO-892).
